**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Goetzke et al. (5,163,816).

Goetzke discloses a compressor wheel assembly (Figs. 2, 5) comprising a compressor wheel 16 mounted to a rotating shaft 40, the shaft extending through a bore provided along the rotational axis of the wheel (Fig. 2), wherein the bore has an inner diameter greater than the outer diameter of the portion of the shaft which passes through the compressor wheel, and a cylindrical sleeve 55 is located concentrically around the shaft between the inner surface of the bore and the outer surface of the shaft to thereby support the shaft co-axially within the bore;

wherein the axial length of the sleeve is less than the axial length of the bore through the compressor wheel (Fig. 2);

wherein the wheel is retained on the shaft by a nut 52 which threads on to one end of the shaft to apply an axial clamping force to the wheel;

wherein the nut bears indirectly against a nose portion of the wheel to clamp the wheel against an abutment (Fig. 2); and

wherein the sleeve is press fitted within the bore of the compressor wheel prior to assembly of the compressor wheel on the shaft (col. 3, lines 50-58).

***Prior Art***

The prior art made of record but not relied upon is considered pertinent to applicant's disclosure and consists of 2 patents.

Hull (2,799,445) and Clavell (3,019,039) are cited to show different impeller mounting configurations.
